Quiz-1, 2026
Course Code: ENG102
Course Title: Writing and Comprehension
Level: 1 Term: 2 Batch: 70_L

Exam Duration: 40 minutes **Marks: 15**

You should spend about 30 minutes on Questions 1–20, which are based on the following Reading Passage.

EUROPEAN TRANSPORT SYSTEMS 1990-2010

What have been the trends and what are the prospects for European transport systems?

A It is difficult to conceive of vigorous economic growth without an efficient transport system. Although modern information technologies can reduce the demand for physical transport by facilitating teleworking and teleservices, the requirement for transport continues to increase. There are two key factors behind this trend. For passenger transport, the determining factor is the spectacular growth in car use. The number of cars on European Union (ELJ) roads saw an increase of three million cars each year from 1990 to 2010, and in the next decade the EU will see a further substantial increase in its fleet.

B As far as goods transport is concerned, growth is due to a large extent to changes in the European economy and its system of production. In the last 20 years, as internal frontiers have been abolished, the El-J has moved from a 'stock' economy to a 'flow' economy. This phenomenon has been emphasised by the relocation of some industries, particularly those which are labour intensive, to reduce production costs, even though the production site is hundreds or even thousands of kilometres away from the final assembly plant or away from users.

C The strong economic growth expected in countries which are candidates for entry to the El—J will also increase transport flows, in particular road haulage traffic. In 1 998, some of these countries already exported more than twice their 1 volumes and imported more than five times their 1990 volumes. And although many candidate countries inherited a transport system which encourages rail, the distribution between modes has tipped sharply in favour of road transport since the 1990s. Between 1990 and 1 99B, road haulage increased by 19.4%, while during the same period rail haulage decreased by 43.5%, although — and this could benefit the enlarged EL] — it is still on average at a much higher level than in existing member states.

D However, a new imperative — sustainable development — offers an opportunity for adapting the EUS common transport policy. This objective, agreed by the Gothenburg European Council, has to be achieved by integrating environmental considerations into Community policies, and shifting the balance between modes of transport lies at the heart of its strategy. The ambitious objective can only be fully achieved by 2020, but proposed measures are nonetheless a first essential step towards a sustainable transport system which will ideally be in place in 30 years' time, that is by 2040.

E In 1 998, energy consumption in the transport sector was to blame for 28% of emissions of C02, the leading greenhouse gas. According to the latest estimates, if nothing is done to reverse the traffic growth trend, C02 emissions from transport can be expected to increase by around 50% to I , 113 billion tonnes by 2020, compared with the 739 billion tonnes recorded in 1990, Once again, road transport is the main culprit since it alone accounts for 84% of the C02 emissions attributable to transport. Using alternative fuels and improving energy efficiency is thus both an ecological necessity and a technological challenge.

F At the same time greater efforts must be made to achieve a modal shift. Such a change cannot be achieved overnight, all the less so after over half a century of constant deterioration in favour of road. This has reached

such a pitch that today rail freight services are facing marginalisation, with just 8% of market share, and with international goods trains struggling along at an average speed of 18km/h. Three possible options have emerged.

G The first approach would consist of focusing on road transport solely through pricing. This option would not be accompanied by complementary measures in the other modes of transport. In the short term it might curb the growth in road transport through the better loading ratio of goods vehicles and occupancy rates of passenger vehicles expected as a result of the increase in the price of transport. However, the lack of measures available to revitalise other modes of transport would make it impossible for more sustainable modes of transport to take up the baton.

H The second approach also concentrates on road transport pricing but is accompanied by measures to increase the efficiency of the other modes [better quality of services, logistics, technology). However, this approach does not include investment in new infrastructure, nor does it guarantee better regional cohesion. It could help to achieve greater uncoupling than the first approach, but road transport would keep the lion's share of the market and continue to concentrate on saturated arteries, despite being the most polluting of the modes. It is therefore not enough to guarantee the necessary shift of the balance.

I The third approach, which is not new, comprises a series of measures ranging from pricing to revitalizing alternative modes of transport and targeting investment in the trans-European network. This integrated approach would allow the market shares of the other modes to return to their 1998 levels and thus make a shift of balance. It is far more ambitious than it looks, bearing in mind the historical imbalance in favour of roads for the last fifty years, but would achieve a marked break in the link between road transport growth and economic growth, without placing restrictions on the mobility of people and goods.

Questions 1—5 **1 x 5 = 05**

Reading Passage 2 has nine paragraphs, A—I.
Choose the correct heading for paragraphs and from the list of headings below.

Write the correct number, i—xi, in boxes 1—5 on your answer sheet.

List of Headings

i.	A fresh and important long-term goal
ii.	Charging for roads and improving other transport methods
iii.	Changes affecting the distances goods may be transported
iv.	Taking all the steps necessary to change transport pattens
v.	The environmental costs of road transport
vi.	The escalating cost of rail transport
vii.	The need to achieve transport rebalance
viii.	The rapid growth of private transport
ix.	Plans to develop major road networks
x.	Restricting road use through charging policies alone
xi.	Transport trends in countries awaiting EU admission

1. Paragraph **B**
2. Paragraph **C**
3. Paragraph **D**
4. Paragraph **E**
5. Paragraph **G**

Example	Answer
Paragraph F	vii

Questions 6—10

1 x 5 = 05

Do the following statements agree with the information given in Reading Passage
In boxes 6—10 on your answer sheet, write

TRUE if the statement agrees with the information
FALSE if the statement contradicts the information
NOT GIVEN if there is no information on this

6. The need for transport is growing, despite technological developments.
7. To reduce production costs, some industries have been moved closer to their relevant consumers.
8. Cars are prohibitively expensive in some ELI candidate countries.
9. The Gothenburg European Council was set up 30 years ago.
10. By the end of this decade, C02 emissions from transport are predicted to reach 739 billion tonnes.

Questions 11—15

0.5 x 5 = 2.5

Multiple Choice Questions

*Choose the correct letter, **A**, **B**, **C**, or **D**. Write the correct letter in boxes 11–15 on you answer sheet.*

11. What is the main point made by the writer in Paragraph A?

A. Information technology will eventually eliminate the need for physical travel.

B. Economic expansion is inextricably linked to the availability of a transport system.

C. The EU fleet is expected to stabilize after a period of rapid growth.

D. Teleworking is the primary factor in reducing passenger transport demand.

12. The writer mentions the "flow" economy in Paragraph B to illustrate

A. how the abolition of frontiers has reduced the need for transport.

B. why production sites are now located closer to the final assembly plants.

C. the impact of economic changes on the way goods are moved across Europe.

D. the necessity of reducing labor costs in intensive industries.

13. According to Paragraph C, the transport situation in EU candidate countries is characterized by

A. a historical preference for road transport over rail.

B. a significant drop in the volume of goods exported since 1990.

C. a decline in rail haulage despite an overall increase in transport flow.

D. an inability to compete with the transport systems of existing member states.

14. What is the writer's opinion on the "second approach" to transport pricing?

A. It is the most effective way to guarantee a shift in the balance of transport.

B. It fails because it does not address the issue of infrastructure investment.

C. It would likely result in rail services gaining the "lion's share" of the market.

D. It would primarily benefit regional cohesion through better technology.

15. Which of the following best summarizes the "integrated approach" described in Paragraph I?

A. It aims to restore 1998 market shares by combining pricing with network investment.

B. It is a new strategy designed to limit the mobility of people and goods.

C. It focuses on breaking the link between road transport and the environment.

D. It is less ambitious than previous attempts to rebalance transport modes.

Questions 16—20 **0.5 x 5 = 2.5**

Summary Completion

*Complete the summary below. Choose **NO MORE THAN TWO WORDS** from the passage for each answer.*

The European Council has identified **16.** _____ as a new necessity for the EU's transport policy. Central to this strategy is the need to achieve a **17.** _____ between different modes of transport. This is particularly urgent because road transport currently produces **18.** _____ of all transport-related emissions. If current trends are not reversed, these emissions are predicted to reach **19.** _____ tonnes by the year 2020. While various approaches have been proposed, the most comprehensive one seeks to decouple transport growth from **20.** _____ without restricting general mobility.
